

Texas Poison Center Network Data Snapshot – 2019

Overview of the 2019 Texas Poison Center Network (TPCN) Data

from the American Association of Poison Control Centers' (AAPCC) National Poison Data System (NPDS)

Poisoning is the leading cause of injury death in the U.S.² In 2019, there were 55 Poison Control Centers (PCCs) serving 330 million people, nationwide. Poison Centers in Texas managed 234,251 cases via telephone, about 75% of which were about people coming into contact with potentially dangerous substances. These types of cases are called exposures. Someone called a Poison Center in Texas about every 2 minutes in 2019.

Who calls poison control centers?

Anyone can experience a poison emergency, and any substance can be harmful if used in the wrong way, wrong amount, or by the wrong person. PCCs take calls about people of all ages, and provide real-time help to callers in 150 languages. In 2019, children under 6 years old accounted for almost half of all human exposures managed by Poison Centers in Texas (48%). However, as in previous years, many of the more clinically serious cases occurred among teens and adults.

Who answers poison control center calls?

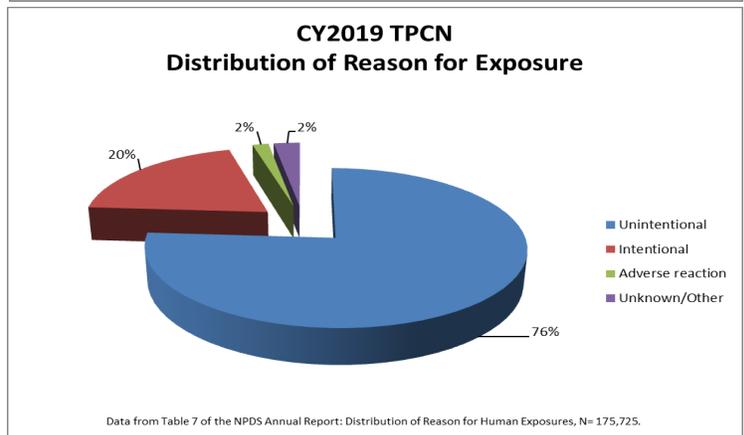

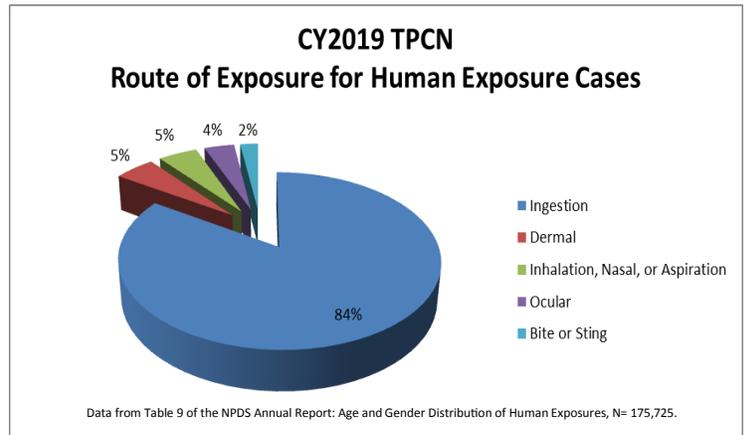

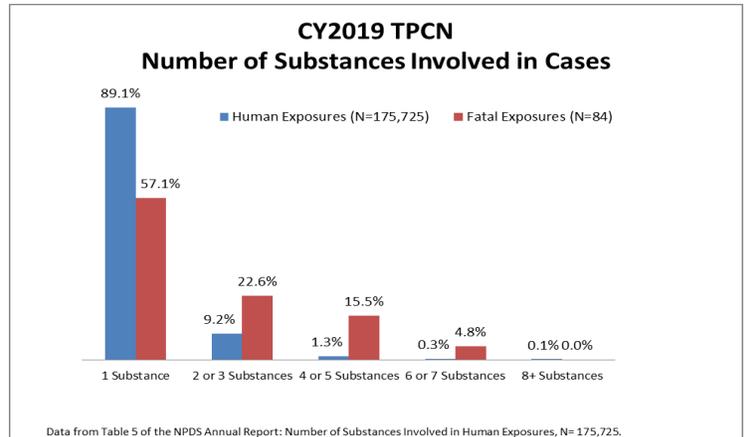

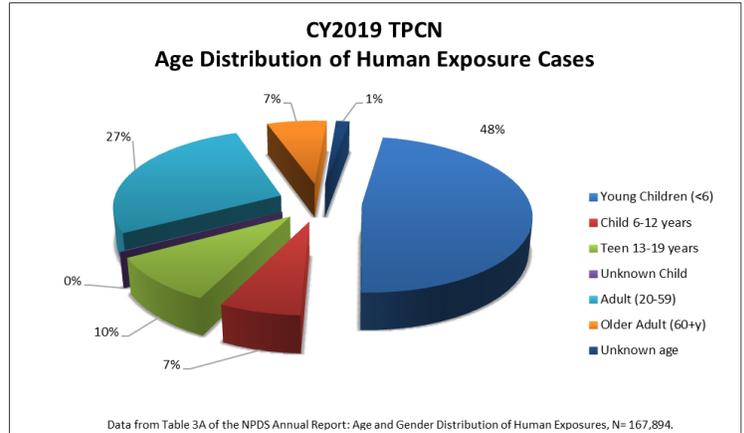

PCC cases are managed by doctors, nurses, and pharmacists who have extensive, specialized training in poisoning prevention and treatment. Even emergency department physicians and pediatricians rely on the experts at PCCs. In 2019 over 25% of human exposure calls came to Poison Centers in Texas from health care facilities.

Why do people call poison control centers?

People call a PCC when they think someone may have been in contact with something that could hurt them, but they also call PCCs for information. While the majority of exposure cases managed by Poison Centers in Texas involved drugs and medications, other exposures included household products, plants, mushrooms, pesticides, animal bites and stings, carbon monoxide, and many other non-pharmaceutical substances. The most exposure cases managed by Poison Centers in Texas involve only one substance, but cases that involve more than one substance tend to be more dangerous. In 2019, while only 11.6% of all exposure cases involved multiple substances, multiple substance exposures represented over 40% of all fatal exposure cases. In 2019, 86.1% of exposures involved someone who swallowed a substance. However, people also call when there is an exposure through the lungs, skin, eyes, and in other ways. Most exposures managed by Poison Centers in Texas were unintentional (76.1%), but Poison Centers in Texas also helped manage medication side effects, substance abuse, malicious poisonings, and suicide attempts.

How are poison control centers preventing poisonings?

Educators at Texas PCC's regularly travel out into the community to raise awareness of the Poison Help number and to share poison prevention messaging. They participate in health fairs, community events, presentations, and even mail-out materials, all for free. In 2019, educators participated in over 1,400 events, reaching over 56,000 people, & gave out over half a million educational materials. They also reach Texans with poison prevention messaging through Facebook, Twitter, & Pinterest.

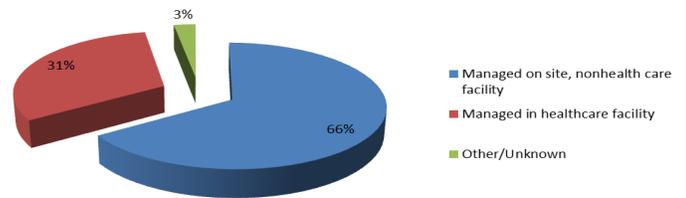

When do people call poison control centers?

Experts answer PCC calls 24 hours a day, 7 days a week, every day of the year. Similar to previous years, in 2019 higher call volumes were observed in the warmer months.

Where do poison exposures occur?

In 2019, 92.1% of human exposures reported to PCCs occurred at a residence, but they can also occur in the workplace, schools, outdoors, and anywhere else. About 66% of exposures reported to PCCs were treated at the exposure site, saving millions of dollars in medical expenses. In fact, poison centers save Americans more than \$1.8 billion every year in medical costs and lost productivity.

CY2019 TPCN Management Site of Human Exposure Cases

Data from Table 10 of the NPDS Annual Report: Management Site of Human Exposures, N= 175,725.

CY2019 TPCN TOP TEN Substance Categories by Age Group

ALL AGES

Substance category	%
Analgesics	11.51
Cleaning Substances (Household)	7.26
Cosmetics/Personal Care Products	5.97
Sedative/Hypnotics/Antipsychotics	5.57
Antihistamines	5.27
Antidepressants	5.15
Cardiovascular Drugs	4.48
Foreign Bodies/Toys/Miscellaneous	3.44
Pesticides	3.22
Dietary Supplements/Herbals/Homeopathic	3.15

N (total for all ages) = 207,525

Young Child (<6)

Substance category	%
Cosmetics/Personal Care Products	10.56
Cleaning Substances (Household)	10.40
Analgesics	8.72
Foreign Bodies/Toys/Miscellaneous	6.40
Dietary Supplements/Herbals/Homeopathic	5.83
Antihistamines	5.67
Topical Preparations	4.41
Vitamins	4.05
Pesticides	3.60
Gastrointestinal Preparations	2.76

N (total young child exposures) = 83,251

Older Child (6-12)

Substance category	%
Analgesics	8.15
Antihistamines	7.84
Foreign Bodies/Toys/Miscellaneous	6.66
Cosmetics/Personal Care Products	6.22
Cleaning Substances (Household)	5.66
Stimulants and Street Drugs	5.14
Cold and Cough Preparations	4.49
Cardiovascular Drugs	4.13
Dietary Supplements/Herbals/Homeopathic	3.97
Vitamins	3.62

N (total older child exposures) = 12,033

Teen (13-19y)

Substance category	%
Analgesics	22.17
Antidepressants	12.40
Sedative/Hypnotics/Antipsychotics	8.93
Antihistamines	7.50
Stimulants and Street Drugs	5.62
Cold and Cough Preparations	3.94
Cardiovascular Drugs	3.52
Anticonvulsants	3.31
Cleaning Substances (Household)	3.11
Cosmetics/Personal Care Products	2.49

N (total teen exposures) = 21,936

Adult (20-59y)

Substance category	%
Analgesics	13.73
Sedative/Hypnotics/Antipsychotics	11.72
Antidepressants	8.94
Alcohols	5.16
Anticonvulsants	5.09
Cleaning Substances (Household)	4.80
Antihistamines	4.78
Cardiovascular Drugs	4.67
Stimulants and Street Drugs	3.59
Bites and Envenomations	3.02

N (total adult exposures) = 61,025

Older Adult (60+y)

Substance category	%
Cardiovascular Drugs	17.19
Analgesics	9.93
Sedative/Hypnotics/Antipsychotics	6.78
Hormones and Hormone Antagonists	6.00
Antidepressants	5.06
Cleaning Substances (Household)	4.14
Anticonvulsants	3.88
Bites and Envenomations	3.65
Pesticides	3.41
Cosmetics/Personal Care Products	3.22

N (total older adult exposures) = 14,760

AAPCC maintains the National Poison Data System (NPDS), the national database of information logged by the country's regional Poison Control Centers (PCCs) serving all 50 United States, Puerto Rico, the District of Columbia, and territories. Case records in this database are from self-reported calls: they reflect only information provided when the public or healthcare professionals report an actual or potential exposure to a substance, or request information or educational materials. AAPCC is not able to completely verify the accuracy of every report made to member centers. Additional exposures may go unreported to PCs and data referenced from the AAPCC should not be construed to represent the complete incidence of national exposures to any substance(s). The term "exposure" means someone has had contact with the substance in some way; for example, ingested, inhaled, or absorbed a substance by the skin or eyes, etc. Exposures do not necessarily represent poisonings or overdoses. Poison control call volume about any given substance is influenced by the public's awareness of the hazard or even the Poison Help line itself, which are heavily influenced by both social and traditional media coverage. In addition, AAPCC is continuously working to update the NPDS substance coding taxonomy to better serve the needs of AAPCC members and surveillance partners. As a result, substances may be reclassified within
